

ROTATORS

- The gear-type design provides a very compact and powerful rotator
- Precise start and stop behaviour – even at maximum load – stability compensation when handling longer loads not necessary
- Rotators with flange are easily and quickly bolted directly to the attachment
- Precise and flexible operation because of the indefinite range of rotation
- The compact design provides additional protection
- Rotators with a shaft in combination with a reduction link make changing attachments as easy as changing a pin and hooking up the hydraulic connections
- The integrated pressure relief valve protects from overload
- A hose guard is available as an option
- Secure and unhindered function is guaranteed
